About JOY AI

JOY AI is an AI-powered automation platform built for service businesses to streamline operations, automate marketing, manage teams, and improve customer engagement, all from one centralized dashboard.

Designed for industries like cleaning, HVAC, plumbing, landscaping, and home services, the platform helps businesses automate repetitive back-office tasks and saved 20+ hours every week

HOW WE HELPED

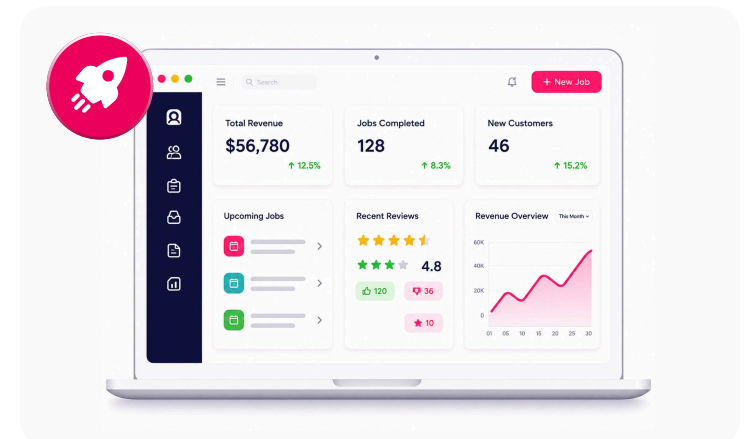

How We Helped JOY AI Automate Service Business Operations

Service businesses often rely on multiple disconnected tools for scheduling, reviews, inventory, team communication, CRM, blogging, and customer engagement. Managing these workflows manually consumes time and slows operational growth.

The goal was to build an all-in-one AI-powered automation platform capable of handling marketing, operations, customer communication, inventory management, and team workflows from a single dashboard.

We developed a scalable SaaS platform that automates repetitive workflows, improves operational visibility, and helps service businesses grow with minimal manual effort.
